Data Center

What makes Sipi different?

We offer a partner approach to ITAD.

We share in the risks and rewards of the partner relationship with your business.

We help you succeed with unique, customized programs.

We focus on the value of a program rather than any single transaction.

We live and breathe asset disposition, it's our core business and has been for over 20 years.

SERVICES OVERVIEW

Relocating IT assets to a new data center, decommissioning, closing or consolidating a data center are all monumental tasks. Absolutely nothing should be overlooked including the security of data bearing assets. Sipi Asset Recovery specializes in creating and executing the intricate plans that are necessary for these large-scale, complicated operations.

We take into account your concerns such as location, data security, value recovery, power connectivity and onsite service personnel and we create a level of service that appropriately fits your company's unique needs. Our decades of hands-on experience have prepared our team for any unique situation, and we work closely with our clients to ensure data center projects proceed smoothly and efficiently.
