

Sipi SecureSM

ABOUT SIPI

- Over 115 years of processing experience
- Registered ISO 9001, 18001, 14001, R2 & e-Stewards - Committed to continuous improvement and green environmental processing
- Broad range of capabilities:
 - Secure destruction
 - Secure IT asset recovery
 - Precious metals recovery
 - Chain of custody solutions

WHY NOW

- Sanitizing hybrid and solid state drives properly is a challenging process
- Impending technology advances to HAMR/MAMR drives will negate the effectiveness of commonly used sanitization methods
- Hybrid, HAMR/MAMR drives are difficult to differentiate from standard rotational hard disk drives
- Mixed destruction methods are difficult to manage
- Surface mount eMMC are becoming harder to identify on a printed circuit board

THE SIPI DIFFERENCE

- Sipi Secure meets NSA guidelines - NIST 800-88r1 Common Criteria EAL6
- Melt process results in total destruction and a cast ingot output eliminates any risk of data recovery.
- Scalable capacity - small quantities up to 35,000,000 pounds annually.
- One-step process minimizes security risks associated with packaging and multiple process points.
- Customized programs meet customer objectives.
- Financial returns possible for certain materials and processing models.
- Green end-of-life solutions for Top Secret / sensitive media, IT assets and components.
- Provide 4 methods of secure destruction, wipe, degauss, crush/shred and FIREMELT™, the process of liquifying data on hard drives.
